(54) Title: **WIDEBAND ANTENNA MODULE FOR THE HIGH-FREQUENCY AND MICROWAVE RANGE**

(57) Abstract: An antenna module more particularly for the high-frequency and microwave range is described which can be operated as a wideband antenna in various frequency bands. For this purpose the antenna module is particularly suitable in that it has an antenna (10) and an HF line (20) to connect the antenna (10) to associated transmit and/or receive stages, while at least parts or sections (21, 22) of the HF line (20) have a mismatch in the form of an impedance deviating from that of the antenna (10). The invention also relates to a telecommunications device having such an antenna module.
